

An aerial photograph of a dense forest. The trees are mostly green, but several large, irregular patches of trees show autumn colors in shades of yellow, orange, and light brown. The text is overlaid on the right side of the image.

**Our biomass
boiler is
fuelled 100%
by woodchip
from local,
renewable
forestry
nearby the
distillery.**

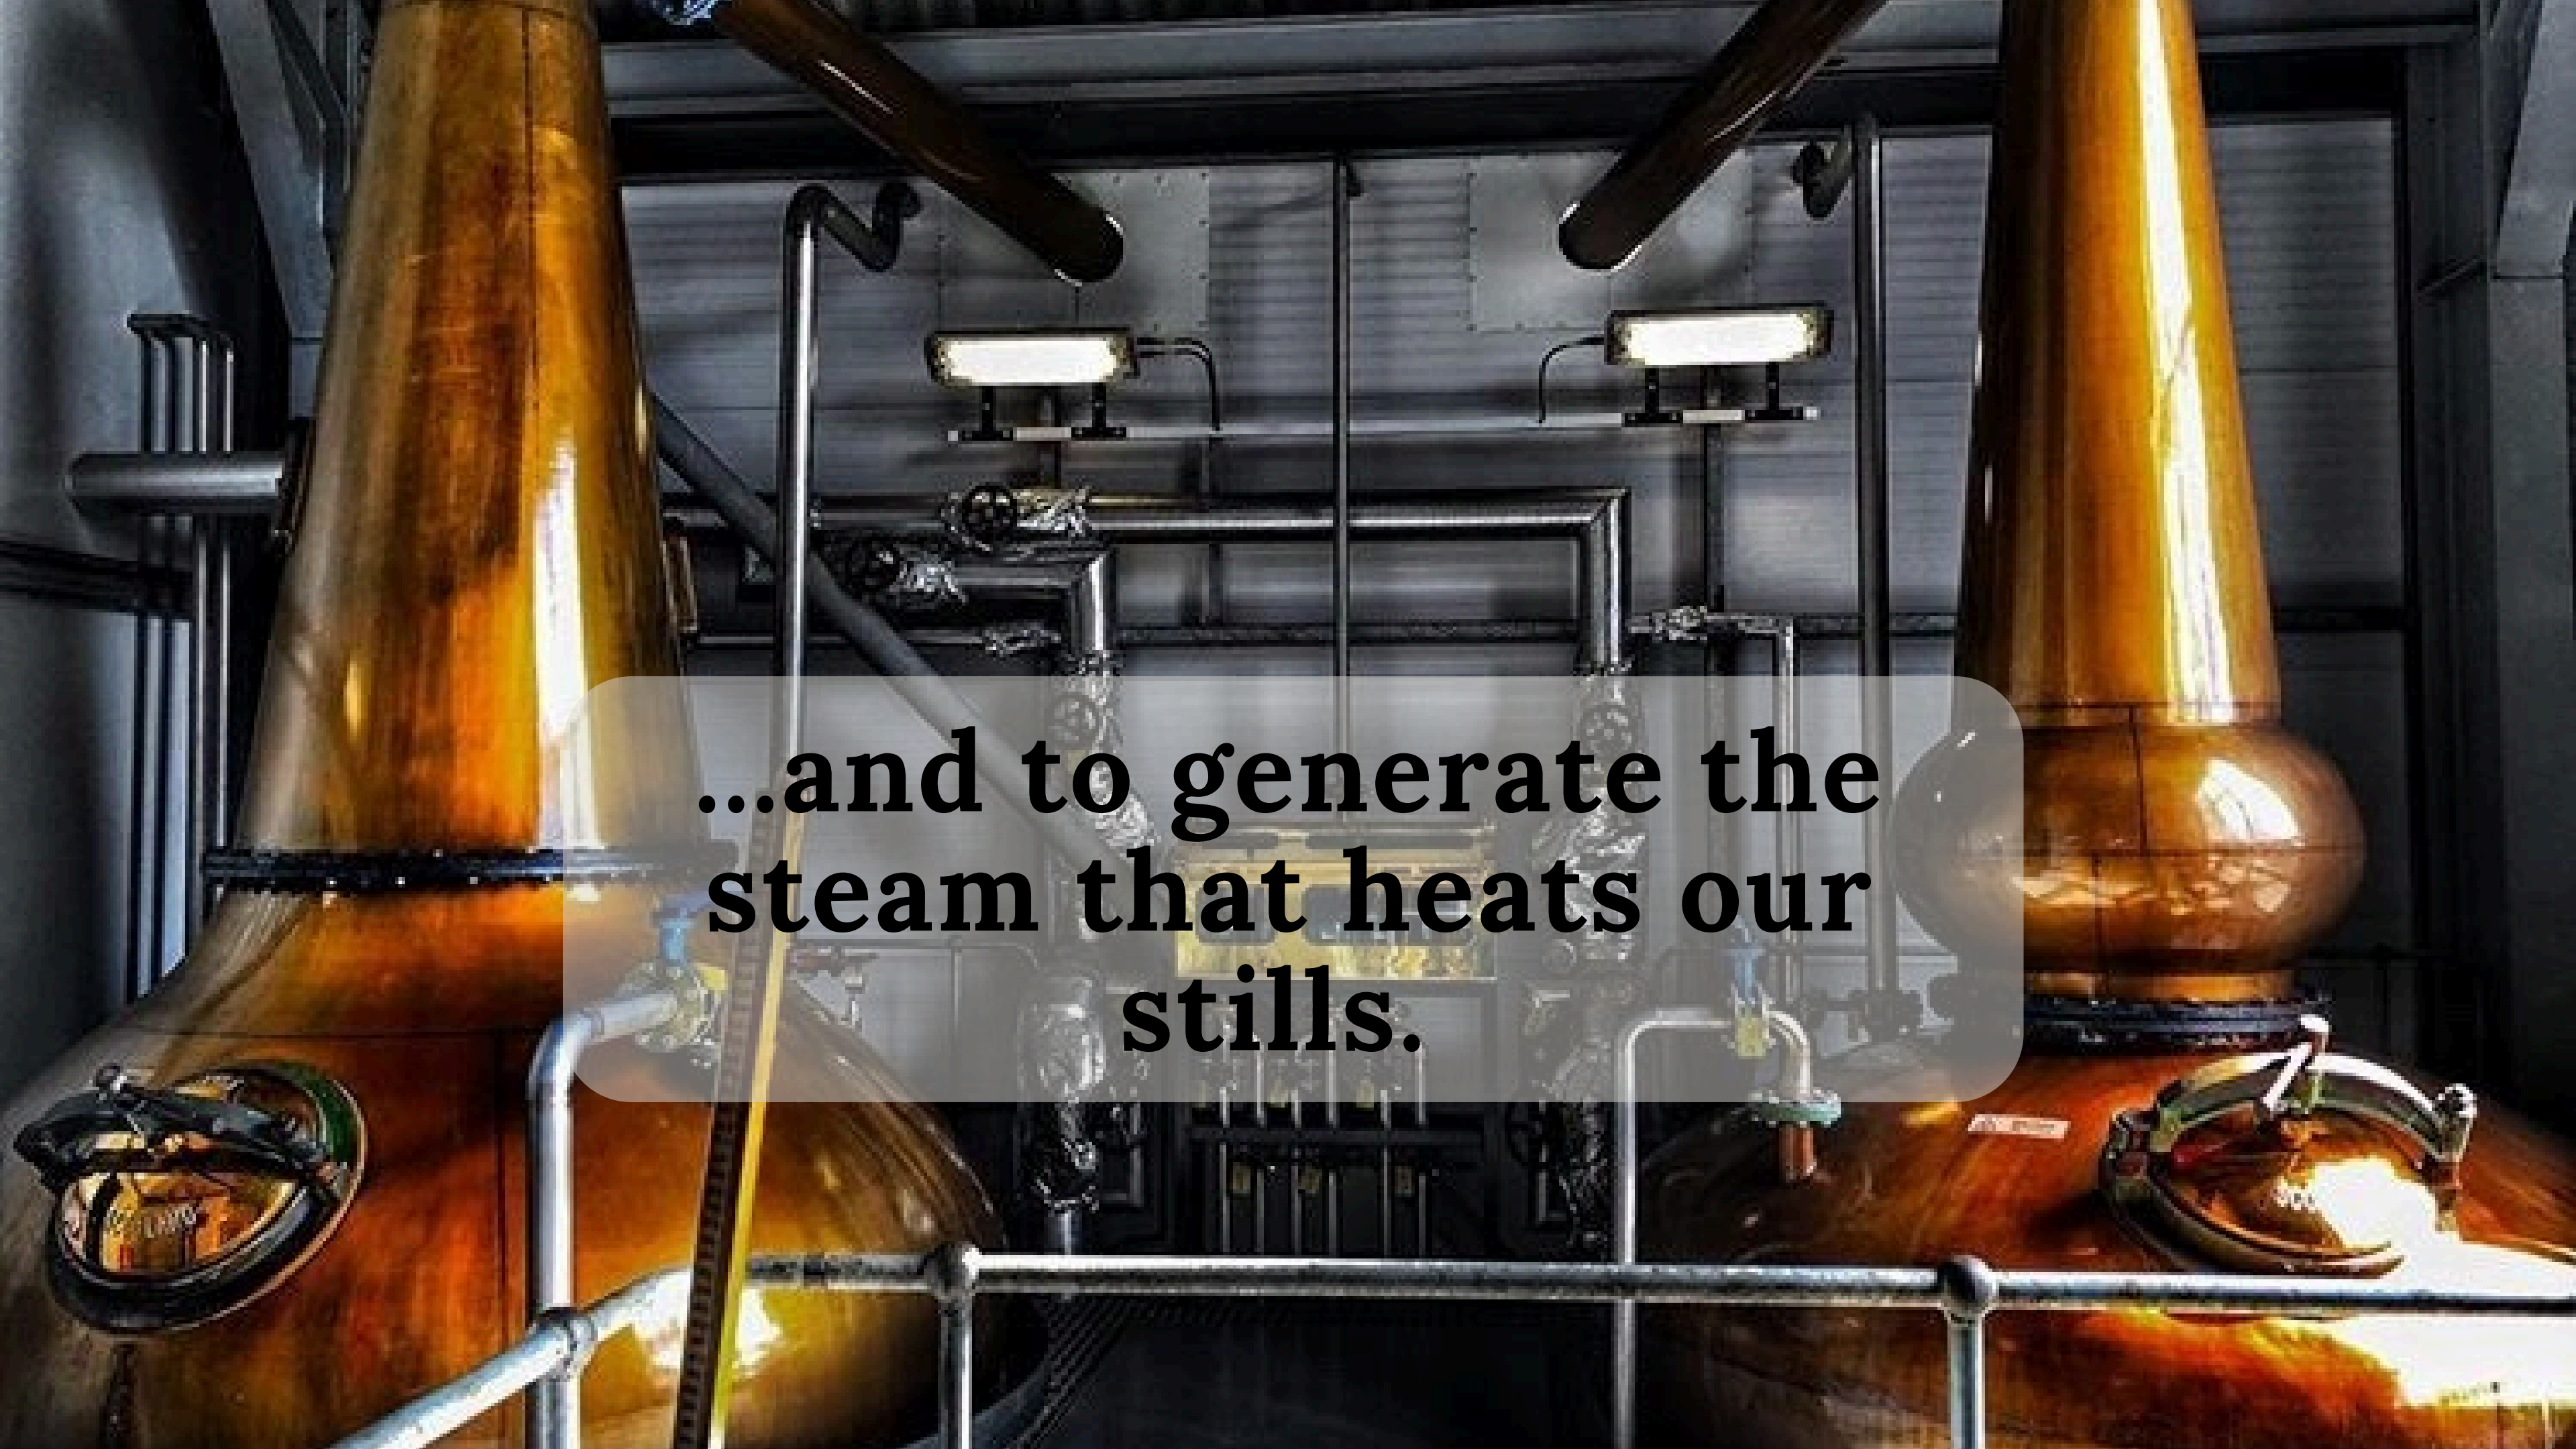

We generate our own
energy from solar panels
and hydro electricity at the
distillery.

An aerial photograph of a distillery complex. The main building is a large, light-colored structure with a central tower and multiple gables. It is surrounded by several smaller buildings, including a long, dark-roofed warehouse-like structure to the left. A parking lot with several cars is in front of the main building. The entire complex is situated in a lush green valley, with dense forests on the lower slopes and rolling hills in the background. The hills are covered in green grass and scattered rocks. The sky is clear and blue.

Our process water comes
from the hill springs
behind the distillery...

...and is used for mashing...

A detailed view of a distillery's interior. Two large, polished copper stills are the central focus, one on the left and one on the right. They are connected by a complex system of stainless steel pipes, valves, and gauges. The background shows more industrial equipment and structural elements of the building. The lighting is dramatic, highlighting the metallic surfaces.

**...and to generate the
steam that heats our
stills.**

The spring water is also used to dilute the spirit before filled into cask.

**We grow 65% of
our own
Scottish barley.**

**The farmer is
SQC certified,
assuring us it
has been grown
in a safe and
responsible way.**

The co-products are taken away and repurposed to add value to the local area.

The draff and pot ale are combined to
create animal feed pellets.
